

DAVID VIGH

(315) 222 - 3004 | DAVID@DAVIDVIGH.COM | GITHUB.COM/DVIGH8

SUMMARY

AI Engineering leader who builds and scales enterprise AI platforms in regulated environments. Hands-on across LLM applications, RAG, agentic workflows, and MLOps, with a track record of translating ambiguous business problems into shipped, auditable AI systems and high-leverage engineering teams.

EXPERIENCE

Atrium Therapeutics (Nasdaq: RNA) - San Diego, CA

Software / Data Engineering Lead

2026 - Present

- Founded the AI & data engineering function for a Nasdaq-listed biopharma spinout; member of the Strategy Office reporting to the CSO, defining AI platform roadmap, governance, and engineering standards from day one
- Architected and shipped the enterprise AI Hub, partnering with outside counsel to land a company-wide AI policy that unblocked broad adoption while preserving controls on confidential data
- Drove company-wide information architecture rebuild across regulatory, R&D, operations, and quality functions, establishing the structured-data foundation for RAG and agentic AI workflows on regulated content
- Led enterprise rollout of AI tooling (Claude, ChatGPT, GitHub Copilot), standardizing prompt patterns, evaluation practices, and IP/data-handling guardrails across the technology org

Avidity Biosciences (acquired by Novartis) - San Diego, CA

Staff Software Engineer

2025 - 2026

- Delivered governed enterprise AI platforms, Tier-1 confidential AI chat, centralized tools hub, and AI management system supporting operations, legal, and manufacturing workflows
- Led acquisition-related data separation including SharePoint extraction and secure migration, supporting business continuity during Novartis transition

Amgen - Deerfield, IL

Senior Machine Learning Engineer

2025

- Modernized machine learning infrastructure and training pipelines through parallel processing and code refactoring, reducing training time by 75% and infrastructure cost by 50%
- Operationalized a transformer-based pipeline generating and ranking qualified sales leads weekly, enabling commercial teams to prioritize high-potential opportunities

Senior Data Engineer

2023 - 2024

- Directed large-scale ETL workflows across vendor sources totaling 200B+ rows/month, delivering curated datasets to Google Cloud, Databricks, and Azure SQL
- Established data science environments and automation patterns that reduced time-to-insight from weeks to days for downstream analytics teams

Horizon Therapeutics (acquired by Amgen) - Deerfield, IL

Senior Data Engineer

2022 - 2023

- Led zero-downtime migration to an upgraded enterprise data format, modernizing downstream consumption

Data Engineer II

2021 - 2022

- Scaled multi-cloud data platform footprint, improving flexibility, throughput, and resilience across analytics workloads

Data Engineer

2020 - 2021

- Architected performance improvements that reduced processing time by 5x for 10B-row monthly deliveries

Contractor

2019

- Directed migration of on-premises distributed computing to Google Cloud Platform

CORE SKILLS

AI Engineering & Leadership: LLM Application Development, RAG, Agentic Workflows, Prompt Engineering, AI Evaluation & Guardrails, MLOps, Vector Databases, AI Governance & Policy, Enterprise AI Enablement, AI Platform Strategy, Cross-Functional Leadership

Data & ML Platforms: Python, SQL, Polars, Pandas, PostgreSQL, Snowflake, Databricks, Apache Spark, Delta Lake, Azure SQL, ETL/ELT, Machine Learning Infrastructure, Transformer Models

Cloud & Application Stack: Azure, GCP, AWS, Docker, Okta, RBAC, TypeScript, Next.js, Git, Bash, PowerShell, JavaScript, Go, Scala, Java

EDUCATION

Clarkson University - Masters of Science, Applied Data Science

Clarkson University - Bachelors of Science, Computer Science
